Dear friends!

We present you the first annual report of the Whole World International Save the Children Charitable Fund which describes the major achievements and results of our work in 2013.

The Whole World Charitable Fund was established in 2012 to help children with serious diseases. The main objective of the organization’s work is to render material aid to children with oncological, hematological and other diseases and traumas in need of expensive high-technology treatment and rehabilitation. The major line of activities of the Fund is aid to children with malignant bone tumors. For many years the treatment of such diseases presupposed major disabling surgeries – complicated amputation of extremities. At present there is a possibility of performing conservative surgeries when the affected section of the bone and joint is substituted with an endoprosthetesis. In children oncological orthopedics use is made of expensive high-technology endoprostheses made to order. Not every family has the financial possibility to pay for such treatment. In such situations the Whole World CF comes to the rescue to little patients in big trouble.

The results presented in this report became possible due to the self-sacrificing and hard work of the entire team of the Whole World Charitable Fund. In 2013 effective and lifesaving assistance was rendered to 17 children with oncological diseases.
The Whole World Charitable Fund receives the major part of donations from individuals. We are currently supported by over 40,000 people from 120 countries of the world and their number keeps growing. The desire to help severely ill children results in consolidation of people from all corners of the planet.

We express heartfelt thanks to our partners and associates as well as those who support us and our activities.

President of the Whole World Charitable Fund

Sumenkov Alexei Nikolaevich
About the Fund

The Whole World International Children Charitable Fund was established on April 12, 2012 in Saint Petersburg. The Fund was registered in the State Register of Nonprofit Organizations under No. 7814011850.

The main objective of the Fund’s work is to render material aid to children with oncological, hematological and other diseases and traumas in need of expensive high-technology treatment and rehabilitation.

What do we do?

• We pay for expensive treatment of children with oncological, hematological and other serious diseases and traumas;
• We buy medical equipment, drugs, medications and prosthetic implants necessary for treatment and rehabilitation of the wards;
• We pay for medical-psychological rehabilitation of the patients receiving treatment in medical institutions;
• We draw attention of the wide public to the problems of children oncology;
• We hold activities for children with oncological diseases;
• We render material aid to the families of our wards.
Whom do we help?

- Children in need of expensive treatment;
- Children having no possibility of receiving high-technology medical service under a quota;
- Children in need of medications, operative treatment, prosthetic facilities, rehabilitation actions, etc.;
- Children who need high-technology treatment abroad for medical indications.

Our wards undergo treatment in leading medical institutions of the Russian Federation, Germany, and Israel:

- N.N. Blokhin Russian Cancer Research Center Federal State Budgetary Institution, Moscow;
- N.N. Petrov Research Institute of Oncology Federal State Budgetary Institution of the Ministry of Health of Russia, Saint Petersburg;
- Municipal Clinical Hospital No. 31 Federal State Budgetary Institution, Saint Petersburg;
- G.I. Turner Scientific and Research Institute for Children’s Orthopedics, Saint Petersburg;
- N.P. Bekhterev Institute of the Human Brain Federal State Budgetary Institution of Science, Saint Petersburg;
- N.N. Priorov Central Research Institute of Traumatology and Orthopedics Federal State Budgetary Institution, Moscow;
- Berlin Charite University, Germany;
- Chaim Sheba Hospital, Israel.
Management Structure of the Whole World International Children Charitable Fund

The Board of the Fund is the supreme management body, its major function being ensuring observance of the objectives set by the Charter by the Fund.

The President of the Fund is the sole executive management body reporting to the Board of the Fund. The President of the Fund manages the day-to-day activities of the organization.

The Council of Experts is the collegial management body of the Fund, its major tasks being consideration of incoming applications and requests for charitable aid. The Council of Experts is entitled to submit proposals about improvement of the organization’s activities and recommendations for its work for consideration by the Board of the Fund, to place issues for consideration on the agenda of the meetings of the Board and the Board of Trustees.

The Board of Trustees supervises the activities of the Fund, decision-making by other bodies and ensuring their execution, use of the Fund’s money, conformity to the legislation of the RF. It carries out its activities on a voluntary basis.
Board of the Whole World International Charitable Fund

Sumenkov Alexei Nikolaevich
President of the Fund

Board member and founder of the Whole World ICCF. Born on March 2, 1973. In 1990 he graduated from Leningrad Suvorov Military School. In 1990-1991 he studied at Kiev Frunze Higher General Service Command School. In 1992 he retired from the Armed Forces of the Russian Federation. He graduated from Murmansk State Technical University, extramural department. Since 1995 to the present day he has been engaged in entrepreneurial activity. He is the founder and director of Media Guide LLC and Grand Travel Group. He is married and has two daughters.

Zaitsev Artem Anatolievich

Member of the Board of the Whole World International Charitable Save the Children Fund. Founder of the Whole World ICCF. Born on January 22, 1982. In 2008 he graduated from Tver State Technical University with a degree in Mechanical Engineering Technology. Since 2006 to the present day he has been engaged in entrepreneurial activity, mostly related to Internet-technologies. He is the founder and director of Gold Line Ltd, Media Guide LLC and Grand Travel Group LLC. He is married and has a daughter.
Safonova Svetlana Alexandrovna

Chief pediatric oncologist of Leningrad region. Member of the Presidium of the Russian Society of Pediatric Oncologists. Candidate of Medical Science, physician of the highest category. For 30 years she has been involved in diagnosis and treatment of children’s malignant tumors at the department of chemotherapy and combined treatment of malignant tumors at N.N. Petrov Research Institute of Oncology FSBI.

Egorenkov Vitaly Viktorovich

Chief of the department of skin, bone and soft tissue tumors of the CSPC of SMA, Oncological, Saint Petersburg. Member of the Society of Oncologists of the CIS, Russia, Saint Petersburg and Leningrad region. Member of the European Society of Oncologists (ESMO).
Our team

RAZUMOVA EVGENIYA LVOVNA
COORDINATOR OF THE WHOLE WORLD INTERNATIONAL CHARITABLE FUND

Member of the Board of Trustees of the Whole World International Charitable Fund.
In 210 she graduated from the department of Tourism and International Economic Relations of Saint Petersburg State University of Service and Economics.

STAROSTENKO ALEXANDRA VIKTOROVNA
MANAGER FOR DEVELOPMENT OF THE WHOLE WORLD INTERNATIONAL CHARITABLE FUND

She completed a training course in International Business at Duale Hochschule Baden-Württemberg, Germany. Graduated from Saint Petersburg State University of Technology and Design. She is a certified specialist in the field of social work with young people, with more than two-year experience of work in the social

NOVIKOV ALEXEI YURIEVICH
PROGRAMMER OF THE WHOLE WORLD INTERNATIONAL CHARITABLE FUND

He graduated from the College of Information Technologies as well as the North-West Technical University. More than 6-year experience in web-developments. He is currently involved in technical support of the projects of the Fund.
Expenses of the Whole World International Charitable Fund in 2013

The expenses for treatment of the wards amounted to 9,418,495 rubles, 67%

The expenses for implementation of the Charitable Program and its support amounted to 3,731,761 rubles, 27%

The administrative expenses amounted to 805,778 rubles, 6% 13,956,044
Since birth Olya Pastukhova has lacked the elbow joint and fingers on her right hand; the muscles responsible for the elbow movement were wrongly formed. To reconstruct the arm it was necessary to install an endoprosthesis which the girl’s parents could not pay for.

The Whole World CF jointly with the Little Country CF raised the necessary money for her treatment. During the surgery a ten-centimeter section of the bone was removed and an endoprosthesis was installed in the place. The second stage of the surgery involved connection of the muscle tendons which will subsequently move the joint to the endoprosthesis. The complicated and meticulous work of forming the elbow joint took the surgeons more than five hours.

Now the most complicated period has started in Olya’s life because she needs to learn to move her arm and to bend it. Learning these skills may take several months and will require help of many rehabilitation specialists. We hope that she will cope with it and we wish her good luck!
In summer 2013 Bogdan Zaremba was going to become a second-grade student and was looking forward to the first of September to see his classmates. In June he was diagnosed with a second-degree osteogenic sarcoma of the left femoral bone. The boy needed a surgery to remove the affected bone and install an endoprosthesis without which he would become disabled. The cost of the prosthesis was 1.5 mln. rubles. The Whole World International Charitable Fund jointly with the Pediatricians Against Cancer Ukrainian Fund raised the money to pay for the expensive implant for Bogdan. The surgery was performed on December 3, 2013 after the boy had received a course of chemotherapy. The surgery took 8 hours and was successful. Now Bogdan is undergoing a course of restorative treatment at the Institute of Cancer in Kiev.
The father of 11-year-old Nune Aloyan applied to the Whole World International Charitable Fund for material aid to pay for the treatment of his daughter.

In the early 2013 the girl started complaining of pain in her leg and back, and when they applied to specialists Nune appeared to have an osteogenic sarcoma of the left femoral bone. The girl was admitted to Municipal Clinical Hospital No. 31 where she received chemotherapy for further surgery. It was established that it was impossible to save the leg as the disease was rapidly progressing, and to save the child’s life she needed hip amputation with installation of metal structures to facilitate wearing a prosthesis in future. The family had no money to pay for the necessary medical materials and drugs, and they only hoped for a miracle.

The Whole World International Charitable Fund succeeded in raising the entire amount to buy the set of the medical equipment necessary for the Nune’s surgery of the total cost of 94,515 rubles. The surgery was performed on June 16, 2013. The surgery involved amputation of the hip and installation of the metal structures for subsequent external prosthetics.
In March 2013 Alina was diagnosed with one of the most aggressive malignant tumors, namely the Ewing sarcoma of the right femoral bone. The girl was under treatment at Petrov Research Institute of Oncology where she received chemotherapy. To save the child it was necessary to perform endoprosthetics of the right femoral bone. Alina needed a German endoprosthesis which the family could not afford and it was impossible to receive treatment under the quota. It took several months to raise the money for Alina, and on September 5, 2013 the surgery was successfully performed at Petrov Research Institute of Oncology.

**WHOM WE HELPED IN 2013**

**Alina Zhigalina**
8 years
Saint Petersburg
**Raised: 1,828,000 rubles**
Oleg Kovalev was studying in his senior year, went in for sports, took part in regional competitions and repeatedly won them. He dreamt of entering the pedagogical physical education department of Belgorod State University and to work as a teacher of physical education after graduation.

In February 2013 the boy started complaining of a nagging pain in the right shoulder and after an examination the boy was diagnosed with an osteogenic sarcoma of the proximal metaphysic of the right humerus. This news was a blow for the entire family. Oleg tried to comfort his mother and support her although it was evident that he was badly distressed himself.

To bring the boy back to normal life worth living it was necessary to perform the surgery of removing the section of the affected bone and installing an endoprosthesis which Oleg’s family could not afford while the surgery was scheduled for mid-July.

The fund-raising to rescue Oleg Kovalev continued for three months. On 22 August the surgery was successfully performed. Now Oleg is back home in Belgorod region where he is getting rehabilitated and starting to return to the usual way of life. The Whole World Charitable Fund keeps in touch with its ward!
Medina was diagnosed with a shin bone tumor. Doctors fought for her life for a year. A surgery was performed but a year later the pain re-surfaced.

After an examination at N.N. Priorov CITO, Moscow, it became clear that the girl had recurrence and needed a repeated operation to remove the bone and install an endoprosthesis.

As the girl was not under the quota and there was an urgent need for treatment, her parents appealed for support to the Whole World International Charitable Fund.

Although the necessary amount to pay for Medina’s operation was not raised within the short time, she had the operation of installing the endoprosthesis at N.N. Priorov CITO, Moscow. The remaining part of the prosthesis cost was covered out of the Fund’s savings. Now the girl has undergone a rehabilitation course and feels good.
In spring 2012 Maxim Gevorkyan suddenly fell ill. The boy became lame of his right leg and there appeared a persistent bruise a bit above his ankle. The doctors claimed it to be a bruise. After a while Maxim was diagnosed with an osteogenic sarcoma of the right shin bone.

The boy underwent severe treatment at Blokhin RCRC in Moscow and at home in Stavropol. The tumor kept growing, the boy felt worse and worse and the doctors decide to take off the leg. The complicated operation was followed by several courses of chemotherapy which failed to produce visible results, and metastases kept growing.

The family got a hope of rescue at the SPC in Solntsevo where Maxim was to undergo an appropriate course of chemotherapy but Maxim’s mother who was a single parent did not have the money to pay for the treatment. Then the Whole World Charitable Fund came to the rescue of the boy and his mother. Just two weeks after the application to the Fund Maxim was admitted to the SPC of Aid to Children in Solntsevo and started getting ready for the next stage of treatment. We wish luck and patience to this wonderful, strong and positive boy!
Ulugbek Dekhkonov has a complex disease: Hodgkin’s lymphoma recurrence. His aunt applied to the Whole World Charitable Fund for help.

Since 2010 the boy had been undergoing treatment in Uzbekistan, Tajikistan and Saint Petersburg; all that time the family had been paying for the expensive treatment themselves as his father worked and their relatives helped them. But in 2012 Ulugbek’s father lost his job. The family was left unprovided for and the boy was unable to continue receiving treatment.

Due to the help of the Whole World International Charitable Fund during 2013 Ulugbek received 6 anti-relapsing courses of chemotherapy and radiotherapy while staying at Petrov Research Institute of Oncology. In January 2014 Ulugbek underwent the procedure of stem cell retrieval at Raisa Gorbacheva Institute of Children’s Hematology and Transplantation and received a course of radiotherapy. At that the decision was to be taken about further marrow transplantation. In the early March 2014 after the long treatment Ulugbek had the long-awaited response! The marrow transplantation was cancelled and the retrieved stem cells will be stored at the clinic should a relapse occur.
The Whole World International Charitable Fund helped Edmond Khachatryan to pay for the growing endoprosthesis of the femoral bone. Edmond underwent postsurgery chemotherapy and was discharged from the hospital. Now the boy is at home, walks well and lives a full life. We have recently received a letter from Edmond:

"Hello, all those who helped me to leave the bed and learn to walk again! Just a year ago I could not imagine that I would be able just to walk without crutches and to walk with my friends. A simple trip by metro was a real event for me after my discharge from the hospital. While at the hospital I would often have a dream that there was no disease and I was just walking in the street. When there is no trouble, you do not feel what happiness it is. Then I would wake up, tell my mother about the dream, and she supported me and said that everything would be like that, that I just was to wait and learn to walk.

Thanks to everybody who helped me at the hard time and said that all was not lost. All the guys with whom I stayed in the hospital became my friends because we fought for life together and just wanted to be happy. And thank you very much for helping my friend Ilya Finagin. All the best, Edmond Khachatryan"
Pavel was a cheerful boy, attended a kindergarten, played and developed. In July 2011 the child fell ill. The doctors failed to diagnose him but soon had a cast in his left eye. The doctors diagnosed Pasha with a cerebellar vermian medulloblastoma. The boy manfully underwent all stages of treatment: 8 courses of chemotherapy at Petrov Research Institute of Oncology, a course of radiotherapy at Blokhin RCRC and 4 more courses of chemotherapy at Petrov Research Institute of Oncology. The treatment was successful and the boy had a response.

Pasha's parents applied to the Whole World International Charitable Fund for assistance in paying for expensive rehabilitation after the treatment at Helios Clinic, Brandenburg, Germany. The Fund started fund-raising for the boy to regain the possibility to walk, to play with other children and to perceive the world.

Unfortunately, in May 2013 Pasha had recurrence, and the rehabilitation in Germany was put off indefinitely. The boy stayed in Russia to undergo treatment and further bone marrow transplantation at Raisa Gorbacheva Institute of Children's Hematology and Transplantation. All the funds raised were given to the family of Pasha Moskalenko.
On November 22, 2013 the mother of Alexei Kovalenko asked the Whole World Charitable Fund for help. Her son was diagnosed with a cerebral tumor and needed urgent surgery that was recommended to be performed at the Clinic of Children’s Neurosurgery of Berlin University. The surgery was scheduled for 27 November, and it was necessary to raise 41,000 USD just within several days. The Whole World Charitable Fund announced urgent fund-raising but it was practically unreal to raise such an amount of money for a fund that has neither serious sponsors nor support of commercial organizations.

What happened may be called a miracle. Owing to the support of common citizens from Russia, Belarus, Ukraine, Kazakhstan, Germany and more than one hundred countries that responded to the appeal for help the amount was raised and the surgery was performed in time. The Fund keeps in touch in the Kovalenko family and regularly receives letters of thanks from them.
In the late 2012 Elina fell on her arm and had a fissure fracture. After a visit to the oncologist and some analyses it turned out that a malignant tumor had destroyed the entire radial bone in the growth zone. The reanalyses made in Saint Petersburg revealed that the tumor was quite rare and very aggressive. Within such a short period there already appeared metastatic foci in the lungs, and urgent hospitalization was necessary to perform chemotherapy and a surgery to remove the tumor and to implant in future.

During 2013 owing to the aid of the Whole World International Charitable Fund Elina had several courses of chemotherapy, had an operation to remove the tumor and to install a metal structure instead of the affected bone. Now the girl is undergoing chemotherapy at Petrov Research Institute of Oncology and will further have an endoprosthesis installed. Elina Kirilova keeps being the Fund’s ward.
Ilya’s parents applied to the Whole World Charitable Fund with a request for help in undergoing treatment in Saint Petersburg. For two years the boy had epileptic seizures twice a day as a complication after the chemoradiotherapy; the boy weighed 40 kilograms and could not move independently. Ilya needed an additional examination at N.P. Bekhterev Institute of the Human Brain FSBIS as there was no appropriate equipment in Murmansk. The main problem was that the needy family had no money to pay for the flight, accommodation in Saint Petersburg and the examination.

After the examination at the Institute of Human Brain the boy had the epilepsy diagnosis cancelled, and it appeared that the epileptic seizures were caused by the residual tumor. Additional examination and new treatment were needed and, accordingly, additional money. Within a month the team of the Fund raised the necessary money to pay for Ilya’s flight, accommodation and treatment, and on 14 March Ilya Demidov with his parents already came to Petersburg.
In September 2011 Lera Rogacheva was diagnosed with BII acute lymphoblastic leukemia. For over a year and a half Lera’s family and doctors fought for her life.

According to the recommendations of Russian doctors, Lera stayed in the clinic of Dusseldorf, Germany. She had repeated bone marrow transplantation after eight-month-long therapy with antibodies. Unfortunately, Russian clinics refused to treat Lera; hope was given in Germany only.

The German clinic evaluated the treatment for Lera at 500,000 euros. As of the moment of appealing to the Whole World Charitable Fund the girl’s family had succeeded in finding about half of the necessary amount; the remaining amount was to be found within less than a month. The girl’s parents raised the money in every possible way: through funds, Internet, social networks.

All the raised money as well as some part of the general savings of the Fund were transferred to the account of Lera Rogacheva’s mother. On 14 June Lera had repeat bone marrow transplantation. Lera’s donor was her mother. A very important stage of the bone marrow survival started. Our Fund hopes that the treatment will prove effective and Lerochka will recuperate!
When in spring 2013 the mother of Olya Zabludina asked the Whole World Charitable Fund for help, the girl was 17. Olya's oncology became known in May 2012. Up to that moment everything had been well: the girl studied, prepared for her first exams and could not even imagine how dramatically everything might change.

Everything started in March 2012 when Olya started complaining of a mounting pain in her left knee. The serious disease was initially taken for a common injury but after thorough examinations the girl was diagnosed with a Ewing sarcoma. The girl was to have leg amputation followed by chemotherapy but nobody could guarantee that Olya would survive.

Hope was given in an Israeli clinic where they promised that the leg could be preserved and the girl could be saved. Fund-raising to pay for the treatment was announced in Olya's native town. After the long treatment in Israel they failed to rescue the leg. The leg amputation was followed by chemotherapy but the examination of the chest showed metastases in both lungs. The clinic in Israel performed surgery on the left lung, and Olya was to have the right lung operated on; but before the second surgery could start, it was necessary to repay the debt for the first one while the family had no money to pay. Every day of the delay could cost Olya Zabludina her life.

The Whole World International Charitable Fund immediately started fund raising to pay for the girl's treatment; all the raised money was given to the mother of Olga Zabludina.

Olga Zabludina
18 years
Armavir
Raised: 249,660 rubles
The Whole World International Charitable Fund has had long time cooperation with Petrov Research Institute of Oncology FSBI in Pesochnoye. Many wards of the Fund are patients of this hospital. Shortly before the New Year the team of the Fund decided to present a real New Year holiday to the children’s department of N.N. Petrov Research Institute of Oncology FSBI in order to make the little patients happy and to present some warmth and smiles to them.

On the New Year Eve Father Frost and Snow Maiden came to the children and arranged a real winter fairytale. There were growing swords, a fight with smoke jets, instantaneous freezing of the snowman’s nose, duel of flying carrots, finger shooting, creation of ice bombs, hats from frosty foam for children, bubbles of wishes and many other things. At the holiday the children...
At the holiday the children got both an enormous amount of positive emotions and impressions and New Year presents from the Whole World Charitable Fund. We hope that such events will become a good tradition for our organization. Dream Holiday Agency helped to organize and conduct the fairytale performance for the children of the department of oncology of N.N. Petrov Research Institute of Oncology FSBI.
WE THANK

The Whole World International Charitable Save the Children Fund expresses its cordial thanks to all those who support our activities, render help and believe in us!
